

Ecological Consultancy

Supporting the
land-based industries
for over a century

©Tony Hamblin (rspb-images.com)

- SAC has a team of conservation consultants throughout Scotland, all of whom have Chartered Environmentalist and MIEEM status.
- We undertake a wide range of ecological survey work and monitoring associated with planning applications and developments, including European Protected Species (EPS) surveys.
- We can undertake ecological survey and monitoring work as a stand-alone service or as part of a full Ecological Impact Assessment (EclA).
- SAC also has in-house expertise available in other aspects of Environmental Impact Assessment (EIA) such as hydrology, soils and waste management.
- A particular strength is our expertise in environmental land management, which has been used to develop mitigation and planning gain measures for a number of proposed developments, including windfarms and housing.

Recent Clients:

- Housing developers
- Windfarm developers
- Quarries
- Golf course developers
- Architects
- Farms & estates
- Utility companies

Examples of work undertaken:

- Protected mammal surveys (badger, water vole, otter, bat)
- Breeding bird surveys
- Phase 1 and NVC habitat surveys (including long-term site monitoring)
- Species & habitat management plans
- Landscape and visual impact assessment
